ADVANCING SURGICAL POSSIBILITIES

PrimaPad

With Lawmed's positioning system, PrimaPad, patients can be safely placed in "steep trendelenburg" during surgery. The PrimaPad helps to practically eliminate patient movement during the procedure while also helping to reduce nerve damage, skin abrasions, and pressure ulcers. Because the PrimaPad is disposable, simple and fast to set-up, it improves room turnover times and helps to reduce infections. It also eliminates the need for other position systems such as shoulder restraints and beanbags.

Lawmed's positioning system PrimaPad is ideal for any surgery where the patient is placed in a moderate or steep Trendelenburg position, including:

- Robotic surgery
- Laparoscopy
- Gynecology
- Urology
- Colorectal procedures

Because the PrimaPad is disposable, simple and fast to set-up, it improves room turnover times and helps to reduce infections.

Constructed with a special viscoelastic foam (sometimes called "memory" foam), the Lawmed PrimaPad:

- Practically eliminates "steep trendelenburg" patient movement
- Conforms to the patient's anatomy
- Helps reduce pressure points
- Body heat retention assists in maintaining normothermia
- Wicks away moisture
- Hypoallergenic
- Not made with natural rubber latex

Features

Benefits

- 1 High coefficient of friction

Our special "memory" foam practically eliminates any movement of the patient when placed in the "steep trendelenburg" position.

- 1 High density viscoelastic foam

The high density nature of the viscoelastic foam helps reduce tissue damage, skin abrasions, and pressure ulcers. The natural properties of the foam retain body heat, thus helping to maintain normothermia.

- 2 Incorporated table rail straps

Four straps are securely sewn into the pad that easily and quickly attach to the surgical table accessory rail, safely fastening it to the table.

- 3 Included body straps

A set of hook-and-loop body straps is included that easily attach to the accessory rail, helping to further secure the patient, especially when tilted.

- 4 Strong non-woven lift sheet

The included non-woven lift sheet can be used for traditional patient transfer, then utilized to wrap and secure the patient arms.

Does not contain natural rubber latex, nano-silver additives or phthalates

Safe for patients and staff with possible allergies and prevention of leaching of potentially harmful compounds.
